

## **5<sup>th</sup> International Workshop on Dynamic Software Product Lines (DSPL'11) at SPLC 2011, Munich, Germany, 26 August 2011**

### **Workshop Organizers**

Svein Hallsteinsen,  
SINTEF ICT, Norway

Mike Hinchey,  
Lero-the Irish Software Engineering  
Research Centre, Limerick, Ireland

Sooyong Park,  
Sogang University, South Korea

Klaus Schmid,  
University of Hildesheim, Germany

### **Program Committee:**

Eduardo Almeida,  
Federal University of Bahia and RiSE,  
Brazil

David Benavides,  
University of Seville, Spain

Jan Bosch,  
Intuit, USA

Vijayan Sugumaran, Oakland University,  
USA & Sogang University, South Korea

In-Young Ko,  
KAIST, South Korea

Hassan Gomaa,  
George Mason University, USA

Jaejoon Lee,  
Lancaster University, UK

Pete Sawyer,  
Lancaster University, UK

Douglas C. Schmidt,  
Vanderbilt University, USA

Danny Weyns,  
KU Leuven, Belgium

*(To be extended)*

### **Important Dates for Paper Submissions**

Submission Deadline: 24 May 2011  
Notification of Acceptance: 12 June 2011  
Camera-Ready Version: 30 June 2011  
Workshop: 26 August 2011

### **Further Information**

<http://www.lero.ie/dspl2011>

### **MOTIVATION AND OBJECTIVE**

Software systems are addressing an increasing range of requirements; requirements that in turn evolve over time. If systems are expected to operate successfully under these circumstances, they need to be able to autonomously adapt to the various constraints and situations autonomously. Software product line (SPL) techniques can be successfully used to provide such flexibility, but in order to be effective their capabilities need to be fully automatized and be made to work at system runtime. Over the last few years, this branch of software systems has established itself as dynamic software product lines (DSPL).

In a DSPL various software variants are managed, variation points are bound flexibly, but all this is done at runtime, this may even mean that the whole product derivation is fully automatic. DSPL is strongly related to current research topics like self-managing systems, autonomous and ubiquitous systems, etc. However, it adds product line engineering techniques, methods and processes to the mix as a conceptual basis.

The objective of this workshop is to provide a forum for the exchange of ideas, to establish cooperations, and to bring industry and research together.

### **TOPICS**

While DSPL rests on the stable foundations of classical product line engineering, there is still a lot of work that needs to be done, especially in areas specific to dynamic software product lines. The workshop will solicit papers covering the three broad areas of DPL, namely, dynamic binding in SPL, dynamic variability management, and applications. In particular, the following specific topics will be covered:

#### Dynamic binding in SPL:

- Dynamic library loading
- Component infrastructure
- Scripting languages
- Reflection
- Dynamic weaving (Aspect-Oriented Programming)
- Modeling

#### Dynamic variability management

- Runtime variability identification
- Runtime variability representation
- Runtime variability implementation
- Managing runtime variants
- Aspect-oriented modeling for runtime variability
- Self-management

### **SUBMISSION**

We solicit short, thought-provoking discussion papers reporting work in progress, industrial experience, etc. Full papers are also eligible and should report mature research results. Papers should be in the ACM SIG Alternative Proceedings Style (A4 paper); for details and templates see:

<http://www.acm.org/sigs/publications/proceedings-templates>

Full papers should not exceed 8 pages and short papers should not exceed 4 pages.

Submissions should be submitted via

<http://www.easychair.org/conferences/?conf=dspl2011> .

Accepted papers of the workshop will be published in the second volume of the SPLC Conference Proceedings with an ISBN.

For more information about the venue, details on organization, etc. please visit the conference homepage at <http://www.lero.ie/dspl2011> .
